

# Digital Transformation & Security for Health and Human Services

More than 93% of healthcare organizations have experienced a data breach in the last 3 years.

## Why Choose Us?

- Corrata works unobtrusively in the background on any iOS or Android device
- Simple to deploy and needs no additional management
- Protects against wide range of threats both known and unknown
- Never compromises user privacy
- FirstNet Verified Partners

## Mission: Working with Mobile

Smartphones & tablets are used every day by your employees and are critical in your mission to help people in your care

However, your staff are potential targets for a constantly evolving set of sophisticated attacks through SMS, social media, and other apps

With sensitive data being accessed and stored on mobile devices, it is essential they have robust protection

## Threats: Device Infections and Data Breaches

Healthcare is one of the most targeted industries for cyber attacks due to the high black-market value of patient information

As targeted SMS scams increase, your employees cannot be expected to always distinguish between a fake and authentic text

A lost or stolen tablet or smartphone gives cyber criminals access to highly confidential medical records. This puts your organization at severe risk of data breach and HIPAA violation

A device that gets infected with malicious malware/spyware/virus could lead to dire consequences for your organisation, employees and your patients

## Solution: Try Corrata & Evo-Stream!

Secure sensitive data with the ability to remote lock & wipe any device that gets lost, stolen or vulnerable

Protect devices from phishing, malware and other malicious mobile threats

Detect & disable zero-day threats and lock critical business apps if a low security score is detected

Limit high data consuming apps and block risky or inappropriate content

Full technology portfolio from networking and devices to security and cloud services
