What is a Security Rankings Report?

Think of it as a consumer credit score for your organization's security posture. Industry leaders use data-driven continuous measurement and scoring of an organization's security performance across more than 20 key risk categories.

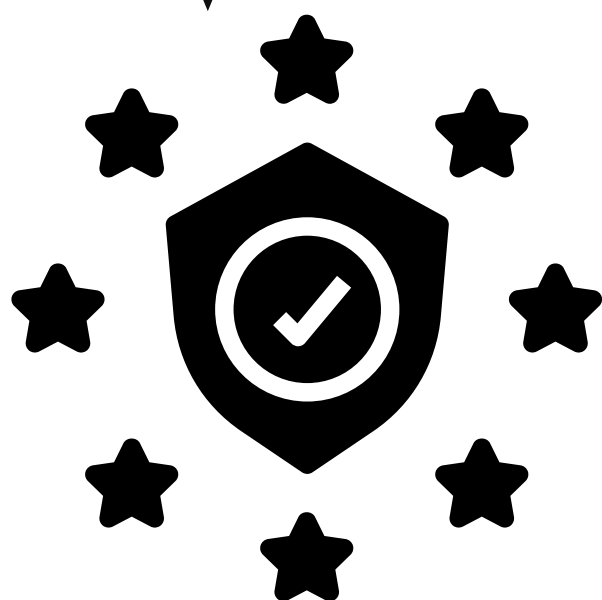

Monitoring and Insights

Continuously monitor your performance and receive actionable insights and remediation recommendations of the cybersecurity risks in your internal IT infrastructure.

Improve Compliance Management

- Identify and solve complex cybersecurity, compliance and risk management challenges. Report improvements to all key stakeholders, regulators and insurers. Track your progress and measure improvement across key categories of cybersecurity scoring.

Vendor Risk Management

- Avoid 3rd party breaches and accelerate the vendor risk assessment process by 75% and cut the questionnaire cycle in half. Close the gaps that hide in a vulnerable and disparate supply chain where bad actors look for exposure. Create questionnaires and manage improvements for all partners in this ecosystem.
